

Project 4 Example - Wireless Systems

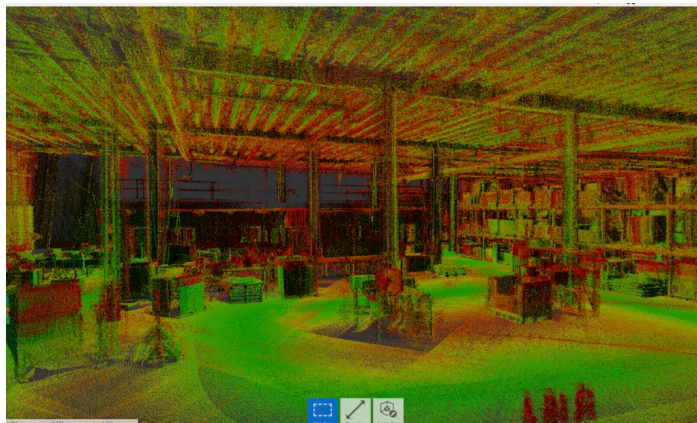

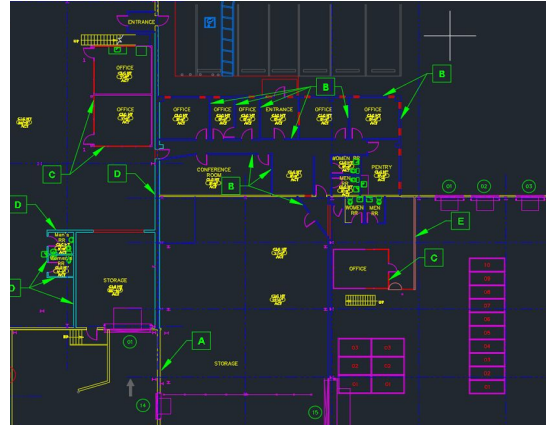

Project Name: Wireless Systems

Project Size: 400,000 sq ft

Deliverables: Drawings with wall materials, Virtual Tours, 3D Point Cloud, 360 Imagery

Field Time: 16 hours

Delivery Time: 3 weeks

Project Overview: 7 sites spread over the US, Canada, and UK needed floor plans, with wall materials, and photographs fast. We scanned with the iMS and captured virtual tours to produce required drawings and allowed the client to not have to visit any sites physically! The approach saved weeks of time and a lot of money to produce a better data package. We are now using that data for Revit modeling, planning, and many other applications!

Benefits of BIM4Sites Approach:

- Unmatched field collection speed
- Complete 3D documentation
- Bonus: 360 Imagery + Virtual Tour
- One site visit. No revisits.
- Accurate and detailed drawings
- Wireless designers never needed to be in field
- Saved time and money
